VoltSpark — 5-Year Strategic Blueprint

April 2026 – March 2031 · Internal Document · Akshaya Createch

> This document is for internal strategic planning and investor conversations. Projections are working estimates based on current market understanding and should be reviewed as the business evolves.

Vision

By 2031, VoltSpark is the standard operating platform for energy consultants and compliance-driven industrial facilities in India — the tool every BEE-certified auditor uses to manage their practice, and the platform every MSME factory uses to prove its energy and compliance performance.

Where We Are Today (April 2026)

Item	Status
Platform	Live at volt-spark.vercel.app — full compliance + energy + IoT stack
Clients	2 (Unnathi CNC Technologies, A Plus Fixtures)
Revenue	Pre-revenue — pilot stage
Team	2 founders (Aravind: tech/product, Lakshminarasimhan: domain/ops)
Hardware partners	Lotus Controls (Schneider authorised), Titan (Tor.ai kitchen metering)
Funding	Raising ₹1 Crore pre-seed
Product completeness	~95% of planned Phase 1–6 features shipped

---

The 5-Year Arc

Year	Theme	ARR Target	Client Sites	Consultants
Year 1 (Apr 2026–Mar 2027)	First Revenue	₹25–30L	50+	10+
Year 2 (Apr 2027–Mar 2028)	Proven Model	₹1.5–2 Cr	300+	50+
Year 3 (Apr 2028–Mar 2029)	Market Leadership	₹8–10 Cr	1,500+	200+
Year 4 (Apr 2029–Mar 2030)	Horizontal Expansion	₹25–30 Cr	4,000+	500+
Year 5 (Apr 2030–Mar 2031)	**Platform & Ecosystem**	**₹60–80 Cr**	**10,000+**	**1,000+**

Revenue projections based on ~₹5,300/IoT site/month average (1 Advanced + 3 Standard meters + 1 Intelligence bundle). Free-tier sites excluded from ARR. Projections are illustrative.

Year 1: First Revenue

April 2026 – March 2027 · Theme: Convert pilots to paying clients. Prove the consultant model.

April 2026 – March 2027

Theme: Convert pilots to paying clients. Prove the consultant acquisition model. Build the sales playbook.

Goals

- 10+ onboarded consultants (BEE-certified auditors, ZED consultants, electrical ESCOs)
- 50+ active client sites (IoT-enabled or paid bundle)
- ₹25–30L ARR
- First published case study (A Plus Fixtures — 3 CNC machines + solar, Bommanahalli)
- First ZED certification supported end-to-end on the platform

Product Priorities

- **Consultant onboarding flow** — self-serve registration, guided client setup, demo data environment
- **WhatsApp alert integration** — automated notifications for deviations, CAPA due dates, compliance deadlines
- **Native mobile app (iOS + Android)** — begin development; PWA interim
- **BESCOM tariff calculator** — PF penalty pre-emption tool (highest ROI proof for consultants)
- **ZED certification workflow** — end-to-end checklist, evidence tracker, submission prep
- **Sensor onboarding UI** — guided setup for vibration, temperature, CO2 sensors per industry bundle

Go-to-Market

- **Primary channel:** Direct outreach to BEE-certified energy auditors (list via BEE India)
- **Secondary channel:** ZED scheme consultants (MSME Ministry network)
- **Anchor partnership:** Lotus Controls — joint GTM with their Schneider hardware sales team
- **Events:** 2–3 industry events (CII Energy Conclave, BEE workshops, MSME expos)
- **First case study:** A Plus Fixtures savings proof — quantified ₹ outcome, published with consent

Team (end of Year 1)

Role	Type
Aravind V Bayari	Co-founder, Tech & Product
Lakshminarasimhan K	Co-founder, Domain & Operations
Full-stack engineer	Hire (funded from pre-seed)
Sales & partnerships manager	Hire (funded from pre-seed)

Funding

- ₹1 Crore pre-seed (Akshaya Createch raise — in progress)
- Use: 40% product, 35% sales, 25% hiring
- Milestone to unlock: 50+ sites, 10+ consultants, ₹25L ARR → Series A preparation

Key Risks

- Consultant adoption slower than projected — mitigation: free tier + white-glove onboarding for first 10
- Hardware installation delays — mitigation: Lotus Controls partnership, local electrician network
- Competition from Tor.ai adding compliance features — mitigation: accelerate ZED/BEE depth

Year 2: Proven Model

April 2027 – March 2028 · Theme: Demonstrate the consultant channel scales. Build for Series A.

April 2027 – March 2028

Theme: Demonstrate that the consultant acquisition channel scales. Build retention data. Prepare for institutional capital.

Goals

- 50+ active consultants
- 300+ client sites (IoT-enabled)
- ₹1.5–2 Cr ARR
- Demonstrated consultant retention: 80%+ of Year 1 consultants still active
- 3+ published case studies across manufacturing, kitchen, healthcare verticals
- CCTS (Carbon Credit Trading Scheme) pilot with 2–3 clients

Product Priorities

- **Native mobile app** — shipped iOS + Android; offline inspection support
- **ML anomaly detection engine** — moves from rule-based to pattern-based alerts
- **Carbon credit tracking** — ISO 50001 + CCTS overlap; baseline → measurement → credit estimation
- **CESC and MSEDCL tariff modules** — extend BESCOM logic to Kolkata and Maharashtra DISCOMs
- **Consultant referral tracking** — consultant-to-consultant referrals with commission tracking
- **API platform (v1)** — webhook and read API for enterprise integrations and third-party auditors
- **Two new industry intelligence bundles** — Textile Manufacturing, Food Processing
- **Bulk import** — CSV/Excel for historical energy data onboarding (reduces consultant setup friction)

Go-to-Market

- **Consultant network effects** — referral programme live; each onboarded consultant incentivised to bring peers
- **DISCOM partnerships** — formal conversations with BESCOM, CESC, MSEDCL for co-marketing
- **OEM supply chain pressure** — target Tier 1 auto OEMs (Bosch, Toyota suppliers) to mandate VoltSpark for vendor ZED compliance

- **Enterprise pilot** — 1–2 multi-site manufacturing groups (5–20 factories under one organisation)

Team (end of Year 2)

Role	Notes
2 founders	Ongoing
2 engineers	Full-stack; 1 from Year 1, 1 new hire
1 sales/partnerships manager	From Year 1
1 customer success manager	New hire — manages consultant onboarding and retention

Funding

- **Series A preparation:** Compile unit economics (CAC, LTV, consultant retention, NRR)
- Target: ₹4–6 Crore Series A (institutional angel or early-stage VC)
- Use: Product depth, DISCOM partnerships, 3–4 additional hires

Year 3: Market Leadership

April 2028 – March 2029 · Theme: Become the default platform for Indian industrial compliance consultants.

April 2028 – March 2029

Theme: Become the default platform for industrial energy compliance consultants in India. Own the ZED + ISO 50001 workflow category.

Goals

- 200+ active consultants
- 1,500+ client sites
- ₹8–10 Cr ARR
- Market position: Recognised as the leading energy compliance SaaS for Indian MSMEs
- Carbon credit transactions facilitated through platform (₹ value tracked)
- First international pilot: Sri Lanka or Bangladesh (similar regulatory structure)

Product Priorities

- **Government portal integrations** — direct submission APIs for BEE, ZED scheme applications (where feasible)
- **Benchmarking engine** — anonymised cross-client kWh/unit, PF, and compliance scores by industry segment
- **Compliance marketplace** — consultants can list services; facilities can find a consultant via VoltSpark
- **White-label platform** — consultant can brand the platform as their own for client-facing views
- **Predictive maintenance module** — vibration + temperature trends → equipment failure prediction (manufacturing bundle)
- **Cold Chain Intelligence bundle** — refrigerated warehouses, logistics hubs
- **TNEB and other state DISCOM modules** — Tamil Nadu, Andhra Pradesh, Telangana tariff logic

Go-to-Market

- **Channel: Electrical contractors** — local contractors who install meters become VoltSpark referrers (they receive a finder's fee per activated site)
- **Channel: CA firms and tax consultants** — energy cost management overlaps with tax planning; build referral partnerships
- **Enterprise sales team** — 1 dedicated enterprise account manager for multi-site manufacturing groups

- **PR and thought leadership** — BEE-certified auditor community, CII, FICCI working groups

Team (end of Year 3)

Function	Headcount
Technology & Product	5 (2 engineers, 1 mobile, 1 data/ML, 1 DevOps)
Sales & Partnerships	3 (1 enterprise, 1 channel, 1 DISCOM relationships)
Customer Success	2
Domain & Operations	Lakshminarasimhan + 1
Leadership	2 founders
Total	**~15**

Funding

- **Series A close:** ₹5–10 Crore
- Use: Product depth, DISCOM integrations, team scale, first international market test

Year 4: Horizontal Expansion

April 2029 – March 2030 · Theme: Healthcare, hospitality, commercial real estate, first international markets.

April 2029 – March 2030

Theme: Extend the platform beyond manufacturing MSMEs into healthcare, hospitality, and commercial real estate — using the same IoT and compliance infrastructure.

Goals

- 500+ active consultants
- 4,000+ client sites
- ₹25–30 Cr ARR (aligns with original SOM target)
- 3+ active international markets (Sri Lanka, Bangladesh, UAE pilot)
- Healthcare vertical revenue: 15–20% of ARR
- Platform marketplace: 100+ compliance service listings

New Verticals (Years 4–5)

Healthcare (NABH/NABH-accreditation driven)

- OT/ICU environment monitoring (temperature, humidity, differential pressure)
- Critical load uptime + DG/UPS performance
- NABH-compatible compliance evidence generation
- Target: Private hospitals, diagnostic chains, pharma manufacturers

Hospitality & Commercial Real Estate

- HVAC efficiency, occupancy-based load management
- LEED/IGBC certification support
- Multi-property portfolio for hotel chains
- Target: Hotel groups, mall operators, office park developers

Government & Public Sector

- PSU factories with BEE Designated Consumer obligations
- Municipal corporation buildings with energy efficiency mandates
- Target: BEE DC scheme participants

Product Priorities

- **Multi-region SaaS architecture** — data residency for international markets
- **SOC 2 Type II compliance** — required for enterprise healthcare and government clients

- **ERP integrations** — SAP, Tally, Oracle (energy cost data → financial reporting)
- **Regulatory submission automation** — BEE PAT cycle submissions, CCTS registry integration
- **Consultant marketplace** — facilities can discover and engage consultants through VoltSpark
- **Advanced carbon reporting** — Scope 1 + Scope 2 emissions, CDP-compatible reports

International Strategy

- **Year 4 target markets:** Sri Lanka (similar electrical regulatory structure, active consultancy sector), Bangladesh (large garments manufacturing, BEE equivalent), UAE (DEWA tariff logic, ESMA compliance)
- Model: Local hardware partner + local consultant recruitment; VoltSpark platform as-is with DISCOM/tariff module localisation

Team (end of Year 4)

Function	Headcount
Technology & Product	10
Sales & Partnerships	6
Customer Success	4
Domain & Compliance	3
International	2
Finance & Operations	2
Leadership	2 founders + 1 COO
Total	**~30**

Funding

- **Series B:** ₹20–30 Crore
- Use: International expansion, healthcare vertical build-out, SOC 2, enterprise sales team

---

Year 5: Platform & Ecosystem

April 2030 – March 2031

Theme: VoltSpark becomes an ecosystem — not just a SaaS product but the operating layer that connects industrial facilities, energy consultants, hardware vendors, DISCOMs, and government schemes in one platform.

Goals

- 1,000+ active consultants
- 10,000+ client sites
- ₹60–80 Cr ARR
- Presence in 5+ countries
- Platform marketplace: 500+ consultant and service listings
- IPO or strategic acquisition readiness

Platform Vision

The VoltSpark Ecosystem by 2031:

1. **Facility layer** — Every industrial facility, hospital, hotel, and office building has a live energy and compliance dashboard
2. **Consultant layer** — Every BEE auditor, ZED consultant, and ESCO manages their practice through VoltSpark
3. **Hardware layer** — Any meter or sensor brand connects via VoltSpark's open IoT API; certified hardware partners listed in marketplace
4. **Government layer** — BEE scheme applications, ZED submissions, CCTS credits — submitted through VoltSpark with one click
5. **Finance layer** — Energy efficiency loan eligibility, SIDBI/NABARD scheme matching, carbon credit monetisation — all driven by VoltSpark data

Product Priorities

- **Open API platform** — third-party developers can build compliance modules, custom analytics, and integrations on VoltSpark
- **AI advisory engine** — platform proactively generates monthly improvement recommendations per client, benchmarked against industry peers
- **Automated audit preparation** — ISO 50001 surveillance audit package auto-generated from platform data
- **Carbon credit monetisation** — verified savings → CCTS registry submission → credit issuance tracking
- **WhatsApp Business integration** — fully embedded; consultants manage client alerts and approvals via WhatsApp
- **Embedded financing** — energy efficiency capex (solar, VFD, transformer) linked to SIDBI/NABARD loan schemes via platform

Financial Model at Year 5

Revenue stream	Contribution
IoT meter subscriptions	40%

Revenue stream	Contribution
Intelligence bundles	30%
Platform / API fees (enterprise)	15%
Carbon credit facilitation fee	5%
Marketplace / transaction fees	5%
International markets	5%

Team (end of Year 5)

Function	Headcount
Technology & Product	20
Sales (India + International)	12
Customer Success	8
Domain & Compliance	5
Finance & Operations	5
Leadership	Founders + C-suite (CTO, CFO, CMO)
Total	**~55**

Exit Considerations

By Year 5, VoltSpark would be an attractive acquisition target for:

- **Schneider Electric / ABB / Siemens** — to acquire India SME market penetration and a consultant distribution network they currently lack
- **Indian IT conglomerates (TCS, Infosys, Wipro)** — to acquire a vertical SaaS for the energy compliance market
- **ESG-focused PE/growth equity** — given the carbon credit and sustainability reporting revenue streams

An IPO path would be viable at ₹60–80 Cr ARR if growth rate and NRR metrics are strong.

Cumulative Revenue Trajectory

Year	ARR	Sites	Notes
Year 1	₹25–30L	50	First paying consultants
Year 2	₹1.5–2 Cr	300	Consultant model validated
Year 3	₹8–10 Cr	1,500	Market leadership, Series A deployed
Year 4	₹25–30 Cr	4,000	Horizontal + international expansion
Year 5	₹60–80 Cr	10,000	Platform + ecosystem

All figures assume ~₹5,300/IoT site/month average and consistent consultant-to-client conversion. Actual performance may vary based on market adoption, competition, and macroeconomic conditions.

Funding Roadmap

Stage	When	Amount	Use
Pre-seed	Apr 2026	₹1 Crore	Product, first 2 hires, 50 client milestone
Series A	~Apr 2028	₹5–10 Crore	DISCOM integrations, team to 15, first international test
Series B	~Apr 2030	₹20–30 Crore	Healthcare vertical, international expansion, SOC 2, enterprise sales

---

Critical Success Factors

1. **Consultant adoption velocity in Year 1** — everything downstream depends on this. The first 10 consultants define the onboarding playbook.
2. **A Plus Fixtures case study** — first verifiable ₹ savings number, published publicly. This is the proof point that replaces 100 feature descriptions.
3. **ZED scheme tailwind** — government subsidies make certification affordable; VoltSpark must be the tool that makes it manageable.
4. **Lotus Controls partnership depth** — the consultant-recommends-hardware-deploys-VoltSpark flywheel must be proven in Year 1.
5. **Retention over acquisition** — a consultant who churns takes 5–20 client sites with them. NRR > 120% is the north star metric.

What This Blueprint Does NOT Assume

- Guaranteed government contracts or mandates
- Viral adoption without a structured sales motion
- A competitor-free landscape (Tor.ai, Schneider/Zenatix, and others are active)
- That pricing will remain unchanged — the IoT meter and bundle pricing should be reviewed at each funding stage based on CAC and LTV data

Prepared by Akshaya Createch · April 2026 · Internal circulation only _Review scheduled: October 2026 (6-month checkpoint after pre-seed deployment)_
