10-MINUTE PITCH SCRIPT

VoltSpark

Save Energy. Stay Safe. Win Customers.

CLIK B2B Networking Meet 2026

6th March | MSME Hall, Rajajinagar Industrial Estate, Bengaluru

Audience: Electronics Manufacturing Industry (25 companies)

LIVE DEMO

volt-spark.vercel.app

demo@voltspark.in / demo123

Opening Hook 1:00

"Good morning everyone. Quick show of hands — **how many of you check your BESCOM bill every month?** *And how many of you know if you're paying a power factor penalty?"*

"I've spoken to 15+ electronics manufacturers in Bengaluru. Almost all of them pay **₹5,000 to ₹20,000 per month in PF penalties** *— without even realizing it. That's ₹1–2 lakhs per year, straight out of your profit."*

"For electronics manufacturing — PCB assembly, SMT lines, testing equipment, reflow ovens — **electricity is your 2nd biggest cost after components**. *And most of us have zero visibility into it."*

Key point: Engage the audience with a show of hands. Pause after the PF penalty number — let it land. This is the hook that makes them pay attention.

The Problem 1:30

> *"Electronics manufacturers face* **3 problems that nobody is solving***:"*

1. Energy Costs Are Invisible

- SMT lines, reflow ovens, wave soldering, ATE — all heavy consumers
- No visibility into which process costs how much
- Hidden penalties — PF, demand overshoot, tariff mismatches in BESCOM bills
- ₹8–9/unit grid cost is eating into already thin margins

2. Compliance is Becoming Mandatory

- ZED certification — MSME ministry pushing hard, linked to subsidies & GeM procurement
- ISO 50001 (Energy Management) — customers like Bosch, Continental, L&T asking for it
- Electrical Safety audits — insurance companies demanding it
- Currently tracked in Excel files, WhatsApp photos, email threads

3. Can't Prove Improvements

- Install APFC panel or switch to LED — but can you prove the ₹ savings?
- Energy consultant gives advice — but where's the ROI data?
- OEM customers ask "what's your energy efficiency?" — no data to show

The Solution — VoltSpark 2:00

> *"We built* **VoltSpark** *— a cloud platform that gives electronics manufacturers complete visibility into energy, compliance, and savings."*

FEATURE	WHAT IT DOES
Utility Bill Analyzer	Enter BESCOM bill → auto-detect PF penalties, demand overshoot, anomalies
Energy Tracking	Monitor grid, solar, DG consumption — monthly trends, year-on-year
Compliance Dashboard	ZED, ISO 50001, Electrical Safety — checklists, evidence, scoring
Savings Tracker	Track actual ₹ saved per improvement — VFD, LED, APFC, solar
ROI Calculator	Payback, NPV, IRR for solar, VFD, APFC, LED, motors
Safety Modules	Inspection checklists, incident reports, certification expiry alerts
Multi-tenant	Consultants manage 10+ factory clients from one dashboard

> *"Think of it as* **Tally for energy & compliance** *— simple, no hardware needed, built for Indian industry."*

Tip: The "Tally for energy" analogy resonates well. Everyone in this audience knows Tally.

Live Demo 3:30

> *"Let me show you the actual product. This is live — not a mockup."*

Open: https://volt-spark.vercel.app → Click "Try Live Demo"
Or login: demo@voltspark.in / demo123

Walk through these screens (30–40 seconds each):

1. **Dashboard**
   "This is what you see when you log in. Energy consumption trends, compliance score, cost breakdowns, upcoming tasks. One screen, complete picture."

2. **Utility Bills**
   "Enter BESCOM bill details — units, demand, power factor, amount. VoltSpark flags: PF penalty ₹8,400. Demand overshoot 15 kVA. This factory didn't know they were paying this."

3. **Savings Tracker**
   "The feature that pays for VoltSpark. VFD — ₹3.15L saved in 12 months. APFC — PF improved 0.85 to 0.98, penalty eliminated. Hard numbers."

4. **Compliance Frameworks**
   "ZED has 50+ requirements. Tick off, attach evidence, see score update live. When auditor comes — one click, everything organized."

5. **Consultant Portfolio**
   "Managing multiple factories? Portfolio view — all clients, scores, pending actions. Switch between clients instantly."

> *"Try it yourself —* **demo@voltspark.in / demo123***. The demo has 20 months of realistic data."*

Why Electronics Manufacturers Need This

1:00

YOUR SITUATION	WHAT VOLTSPARK DOES
BESCOM bill is ₹3–8 lakhs/month	**Find hidden PF penalties & demand overshoot**
OEM customer asks for ZED / ISO cert	**Digital compliance tracking with evidence**
Installed solar/VFD but can't prove ROI	**Savings tracker with ₹ proof month-by-month**
Energy consultant gives advice	**Track if recommendations actually saved money**
Insurance audit for electrical safety	**Inspection records, certification tracking, expiry alerts**
Want government subsidies (CLCSS, ZED)	**Auto-match eligible schemes, track applications**

> *"If you have an electricity bill and compliance requirements —* **VoltSpark is for you.***"*

Traction 0:30

- **Live product** — not a prototype, not a pitch deck. Working software.
- **First customer** — CNC machining factory in Peenya, Bengaluru
- **Full-featured** — 31 modules, 20 months of operating data in demo
- **Cloud-based** — no hardware, no installation, works on phone & laptop
- **Made in Bengaluru** for Indian industry

Pricing 0:30

PLAN	PRICE	BEST FOR
Starter	Free	Single factory, basic energy tracking
Professional	₹2,999/month	Full features, up to 10 factories
Enterprise	Custom	Unlimited, white-label for consultants

> *"If VoltSpark catches even one PF penalty of ₹8,000/month — it* **pays for itself 3x over***. That's not a cost, that's an investment with guaranteed returns."*

Call to Action 0:30

> *"I'm here at the table all day.* **Three things you can do:***"*

1. **Try the demo on your phone** — volt-spark.vercel.app → demo@voltspark.in / demo123
2. **Bring your last BESCOM bill** — I'll show you in 2 minutes if you're paying hidden penalties
3. **Talk to me at the table** — if you run a factory or consult for one, let's discuss your workflow

> **"VoltSpark — Save Energy. Stay Safe. Win Customers."**

Timing Summary

SECTION	DURATION	CUMULATIVE
Opening Hook	1:00	1:00
The Problem	1:30	2:30
The Solution	2:00	4:30
Live Demo	3:30	8:00
Why Electronics Mfg	1:00	9:00
Traction + Pricing	1:00	10:00
Call to Action	0:30	**10:30**

Table Display Checklist

- ☐ Laptop with volt-spark.vercel.app open (demo logged in)
- ☐ Phone showing the demo (for quick table-side demos)
- ☐ WhatsApp share text ready to send
- ☐ QR code to volt-spark.vercel.app printed / on screen
- ☐ 2–3 printed one-pagers or business cards with demo credentials
- ☐ Sample BESCOM bill to show live analysis

Backup Q&A Answers

"How is this different from SAP / Schneider EcoStruxure?"

Those are ₹10–50 lakh enterprise tools for Tata/Reliance. VoltSpark is built for MSMEs — ₹3K/month, no hardware, no IT team needed. Start in 5 minutes.

"Does it need IoT sensors?"

No. Start with monthly bill data — that alone gives you 80% of insights. IoT integration is on the roadmap for companies that want real-time monitoring.

"What about data security?"

Multi-tenant with row-level isolation. Your data is completely separate. Hosted on enterprise cloud. No data mixing.

"We already have an energy consultant."

Perfect — VoltSpark makes your consultant more effective. They can track recommendations, prove savings, generate reports. Ask them to try it.

"Can it handle our specific compliance needs?"

Compliance frameworks are configurable. ZED, ISO 50001, and Electrical Safety are built-in. We can add industry-specific requirements.

"We're a small unit, is it worth it?"

The smaller you are, the more ₹8–9/unit electricity hurts margins. Even 5% reduction on ₹3L/month bill = ₹15K/month saved = ₹1.8L/year.
